Lucian's Science Fiction Novel True Histories:

Interpretation and Commentary

Georgiadou,Larmour,2018-07-17 This is the first substantial commentary on Lucian's *Verae Historiae* (True Histories), a fantastic journey narrative considered the earliest surviving example of Science Fiction in the Western tradition. The Introduction situates the work in the context of Lucian's oeuvre, especially his preoccupation with distinguishing truth from fiction and exposing the lies of philosophers. In their commentary, the editors trace the sources and the meaning of the numerous intertextual allusions and parodies of philosophers, poets, historians and paradoxographers. The *Verae Historiae* emerges from this scrutiny as a remarkably complex text with some very modern concerns: it problematizes the act of reading, allegorical interpretation, authorial reliability, and the validity of cultural norms and literary genres.

Scientific Basis for Nuclear Waste Management Clyde J.

Northrup,2013-12-19 The Symposium on the Scientific Basis for Nuclear Waste Management was held in the fall of 1979 in Boston, Massachusetts and was one of a number of symposia included in the Annual Meeting of the Materials Research Society. The thrust of this annual Symposium is unique in the area of waste management. Recognizing that this is an area of great complexity which requires contributions from scientists with many different backgrounds some of which are not normally associated with nuclear energy, the Materials Research Society provides a forum for discussions of a wide range of materials behavior and transport phenomena. As can be seen from the list of references in each paper, the authors draw heavily on contributions associated with

professional societies in addition to the Materials Research Society, and this annual meeting encourages the cross-fertilization between disciplines that are essential to an adequate treatment of the problems associated with nuclear waste management. The proceedings of the first Symposium that was held in 1978 was designated as Volume 1 in this series. The third Symposium is scheduled for 1980. The scope of the 1979 Symposium was guided by the Steering Committee: R. L. Schwoebel, Sandia Laboratories, USA (Chairman) W. Carbiener, Battelle Memorial Institute, Columbus, USA D. Ferguson, Oak Ridge National Laboratory, USA W. Heimerl, DWK, Mol, Belgium W. Lutze, Hahn Meitner Institut, Berlin, W. Germany J. D. Mather, Institute of Geological Sciences, Harwell, UK G. Oertel, Department of Energy, USA R.

Food and Package Engineering Scott A. Morris, 2011-08-23 For the first time, engineering for the packaging industry – and for the biggest packaging user, food processing – is presented in a way that clearly demonstrates its interconnected, globally integrated nature. *Food and Package Engineering* is a groundbreaking work that serves as a comprehensive guide to the complexities and the potential of the industry. Packaging draws on nearly every aspect of science, technology, business, social science, and engineering. Rather than present a traditionally linear view of these topics, the author takes a Packaging Cycle approach by guiding readers through the life of the package from raw materials and conversion, operations, distribution, retail, all the way to recycling or disposal by the consumer. *Food and Package Engineering* includes many essential topics usually not addressed in other food engineering or packaging texts, including: Raw materials production and conversion Inventory management and production scheduling Regulations, security and food safety Recycling and landfill issues Transportation systems and distribution packaging Evaluation of developing technologies The comprehensive approach of this volume provides a framework to discuss critical interrelated topics such as economics, politics, and natural resources. Intended for

readers with varying levels of experience, Food and Package Engineering provides multi-level accessibility to each topic, allowing both students and professionals to find useful information and develop technical expertise. Rather than being a simple exposition of technical knowledge, the book provides both real-world examples and challenging problems that require consideration at several different levels. Extensively illustrated and meticulously researched, Food and Package Engineering offers both a technical and a real-world perspective of the field. The text serves the student or industry professional at any level or background as an outstanding learning and reference work for their professional preparation and practice.

Health and Safety in Emergency Management and Response Dana L. Stahl,2020-12-22 This book familiarizes personnel serving as Emergency Managers, Safety Officers, Assistant Safety Officers, and in other safety-relevant Incident Command System (ICS) roles with physical and psychosocial hazards and stressors that may impact the health and safety of workers and responders in an All-Hazards Response, and ways to minimize exposure. This book provides knowledge on regulations and worker safety practices to the Safety Officer with an emergency responder background, and provides the tools for the Safety Officer with an industrial hygiene or safety professional background that help them be successful in this role. In order to work together effectively, it is important that anyone responding to an emergency be familiar with all standards and protocols.

Mind, Body, and Emotion in the Reception and Creation Practices of Fan Communities Jessica Hautsch,2023-07-12 This book argues that fans' creative works form a cognitive system; fanfic, fanvids, and gifs are not simply evidence of thinking, but

acts of thinking. Drawing on work in cognitive linguistics, neuroscience, cognitive philosophy, and psychology—particularly focused on 4-E cognition, which rejects Cartesian dualism—this project demonstrates that cognition is an embodied, emotional, and distributed act that emerges from fans’ interactions with media texts, technological interfaces, and fan collectives. This mode of textual engagement is deeply physical, emotional, and social and is enacted through fanworks. By developing a theory of critical closeness, this book proposes a methodology for fruitfully putting cognitive science in conversation with fan studies.

Burn Albert Bates,Kathleen Draper,2020-04-14 In order to rescue ourselves from climate catastrophe, we need to radically alter how humans live on Earth. We have to go from spending carbon to banking it. We have to put back the trees, wetlands, and corals. We have to regrow the soil and turn back the desert. We have to save whales, wombats, and wolves. We have to reverse the flow of greenhouse gases and send them in exactly the opposite direction: down, not up. We have to flip the carbon cycle and run it backwards. For such a revolutionary transformation we’ll need civilization 2.0. A secret unlocked by the ancients of the Amazon for its ability to transform impoverished tropical soils into terra preta—fertile black earths—points the way. The indigenous custom of converting organic materials into long lasting carbon has enjoyed a reawakening in recent decades as the quest for

more sustainable farming methods has grown. Yet the benefits of this carbonized material, now called biochar, extend far beyond the soil. Pyrolyzing carbon has the power to restore a natural balance by unmining the coal and undrilling the oil and gas. Employed to its full potential, it can run the carbon cycle in reverse and remake Earth as a garden planet. Burn looks beyond renewable biomass or carbon capture energy systems to offer a bigger and bolder vision for the next phase of human progress, moving carbon from wasted sources: • into soils and agricultural systems to rebalance the carbon, nitrogen, and related cycles; enhance nutrient density in food; rebuild topsoil; and condition urban and agricultural lands to withstand flooding and drought • to cleanse water by carbon filtration and trophic cascades within the world's rivers, oceans, and wetlands • to shift urban infrastructures such as buildings, roads, bridges, and ports, incorporating drawdown materials and components, replacing steel, concrete, polymers, and composites with biological carbon • to drive economic reorganization by incentivizing carbon drawdown Fully developed, this approach costs nothing—to the contrary, it can save companies money or provide new revenue streams. It contains the seeds of a new, circular economy in which energy, natural resources, and human ingenuity enter a virtuous cycle of improvement. Burn offers bold new solutions to climate change that can begin right now.

Beating Boredom as the Secret to Managing ADHD

Letitia Sweitzer, 2014-06-21 Boredom and boredom avoidance drive the behaviours of inattention, impulsivity, and hyperactivity – the diagnostic criteria of ADHD. This is the first ADHD resource to thoroughly explore the connection between the two. Full of innovative approaches, the book introduces a wide range of strategies for professionals working in clinical, educational and therapeutic settings to help those with ADHD beat boredom and engage with tasks and goals they want or need to achieve. Approaches specifically designed for toddlers, children, teenagers and adults are included, which can then be incorporated into schoolwork, jobs, relationships and everyday life. This practical resource will provide professionals who diagnose, treat, coach, and teach those with ADHD or those who suffer from frequent or pervasive boredom, with the tools to alleviate boredom in order to improve both concentration and mood.
