Reclaiming the Archive Vicki Callahan,2010-04-15 *Reclaiming the Archive: Feminism and Film History* brings together a diverse group of international feminist scholars to examine the intersections of feminism, history, and feminist theory in film. Editor Vicki Callahan has assembled essays that reflect a range of methodological approaches—including archival work, visual culture, reception studies, biography, ethno-historical studies, historiography, and textual analysis—by a diverse group of film and media studies scholars to prove that feminist theory, film history, and social practice are inevitably and productively intertwined. Essays in *Reclaiming the Archive* investigate the different models available in feminist film history and how those feminist strategies might serve as paradigmatic for other sites of feminist intervention. Chapters have an international focus and range chronologically from early cinema to post-feminist texts, organized around the key areas of reception, stars, and authorship. A final section examines the very definitions of feminism (post-feminism), cinema (transmedia), and archives (virtual and online) in place today. The essays in *Reclaiming the Archive* prove that a significant heritage of film studies lies in the study of feminism in film and feminist film theory. Scholars of film history and feminist studies will appreciate the breadth of work in this volume.

Gaining Ground Jennifer A. Clack, 2012 Around 370 million years ago, a distant relative of a modern lungfish began a most extraordinary adventure—emerging from the water and laying claim to the land. Over the next 70 million years, this tentative beachhead had developed into a worldwide colonization by ever-increasing varieties of four-limbed creatures known as tetrapods, the ancestors of all vertebrate life on land. This new edition of Jennifer A. Clack's groundbreaking book tells the complex story of their emergence and evolution. Beginning with their closest relatives, the lobe-fin fishes such as lungfishes and coelacanths, Clack defines what a tetrapod is, describes their anatomy, and explains how they are related to other vertebrates. She looks at the Devonian environment in which they evolved, describes the known and newly discovered species, and explores the order and timing of anatomical changes that occurred during the fish-to-tetrapod transition.

Redundant God? Christian Faith in the Light of Evolution David de Pomerai, 2020-11-24 Does evolution make faith superfluous? Part One of this book looks across the whole spectrum of biology—from molecules to ecosystems to human societies—and at the fossil history of life on earth, concluding that evolution is the only explanatory concept that makes sense of it all. Doesn't this demolish the core Christian claim that God created the entire universe? Part Two explores whether God might instead embrace that universe with love and compassion, without micromanaging or interfering. Jesus bears witness to such a God in his kingdom teaching, calling Christians to follow his example of humility, serving others, and valuing what the world considers unimportant. This suggests paths of repentance and restraint that are urgently needed in a world facing rapid climate change and likely mass extinction.

Pain Hubert van Griensven, Jenny Strong, Anita M. Unruh, 2013-12-06 The highly anticipated new edition of Pain: a textbook for health professionals (previous subtitle a textbook for therapists) has undergone a major rewrite in order to reflect the rapid developments in the field of pain management. It highlights an effective and evidence-based method, providing the theoretical basis to help with the

assessment and management of persistent pain, while also discussing in depth a range of specific approaches. Pain: a textbook for health professionals is written emphatically from a biopsychosocial perspective. In order to set the scene, the introductory section includes chapters on the patient's voice and social determinants of pain. This ensures that the deeply personal and social aspects of pain are not lost among the more technical and biological commentary. These aspects provide an overall context, and are revisited in chapters on participation of life roles, work rehabilitation and psychology. The basic science section includes key chapters on the psychology, neuroanatomy and neurophysiology of pain. This provides a basis for subsequent chapters on specific approaches such as pharmacology, physical therapy and complementary medicine. Pain in specific patient groups, including children, the elderly and those with cancer, are dealt with in separate chapters, as are pain problems such as complex regional pain syndrome and chronic spinal pain. Although the emphasis of the book is on long term pain, acute pain is discussed as a possible precursor and determinant of chronicity. Patient-centred approach to care – advocates listening to the patient's voice Covers social determinants of pain Guides the reader from pain psychology to the practical application of psychological interventions Learning aids – chapter objectives, reflective exercises, case examples, and revision questions Emphasizes an evidence-based perspective Written by an international team of experts topics such as pain in children and the elderly, pain education for professionals, disability and medico-legal aspects expanded focus on complex regional pain syndrome, acupuncture and psychology improved layout for a better learning and studying experience

Heart Disease Gerdi Weidner, Mária Kopp, Margareta Kristenson, 2002 Annotation This book addresses one major question: Why do men get more heart disease than women? Recent global trends in heart disease show that traditional coronary risk factors, such as elevated blood pressure and cholesterol are poor candidates in explaining the gender gap in heart disease. Changes in these risk factors also cannot explain the recent cardiovascular disease epidemic among middle-aged men in Eastern Europe. This book will focus on environmental, behavioral, and psychosocial variables, as well as new risk factors of a biological nature in an attempt to understand the

gender gap in heart disease. It combines perspectives from numerous disciplines, such as demography, epidemiology, medicine, sociology, and psychology. This book features the work of a distinguished group of international researchers appearing in Richard Stone's report on Stress: the invisible hand in Eastern Europe's death rates (Science, vol. 288, June 9, 2000, pp. 1732-33). It combines perspectives from numerous disciplines, such as demography, epidemiology, medicine, nutrition, sociology, and psychology to explore the environmental, behavioral, and psychosocial influences on men's greater susceptibility to heart disease
