**From Shock to Therapy** Grzegorz W. Kołodko, 2000 Written by the architect of Poland's successful economic reforms, this is a comprehensive study of the economics and politics of postsocialism in thirty transitional economies of Europe and Asia.

**The Successes and Failures of Economic Transition** H. Gabrisch, J. Hölscher, 2006-08-25 This book takes a macroeconomic approach to the issue of transformation from communist economies into market economies. At the centre of the analysis stands the role of the state and the definition within a dramatically changing environment. Particular emphasis is given to the emerging role of money and the financial sector.

**Lessons from the Economic Transition** Salvatore Zecchini, Organisation for Economic Co-operation and Development, 1997-02-28 Economists from eastern and western Europe and the US offer their views on the shortcomings and pitfalls in the transition policies applied so far and on what policies should be pursued to attain the result they favor. Focusing mostly on Bulgaria, Romania, and Russia, they examine the overall framework of the transition strategy, the restructuring and development of the enterprise sector, the unemployment problem and social issues, and the integration of countries in the region into the world economy. The 23 papers are revised from presentations at a May 1996 colloquium, and comments and summaries of general

discussion are included for each major topic. No index. Annotation copyrighted by Book News, Inc., Portland, OR

*Market-oriented Systemic Transformations in Eastern Europe* Paul J.J. Welfens, 1992-09-10 Socialist economies in Eastern Europe have collapsed and embarked upon market-oriented reforms. The causes of the demise of centrally planned economies are analyzed and the basic challenges of systemic transformation discussed. Negative income and wealth effects as well as distribution issues make adjustment extremely difficult. The fundamental roles of privatization and foreign investment are addressed. Foreign economic liberalization is considered to be of central importance for a growth-oriented adjustment path in a stage of conflict-prone policy and options. Politico-economic aspects of the new European developments in addition to North-South issues are analyzed. Difficult choices await decision-makers in economic policy and the business community in Eastern Europe and in leading market economies.

**Good Governance in Central and Eastern Europe** Herman Willem Hoen, 2001-01-01 'Undeniably Good Governance in Central and Eastern Europe provides many insights in the political economy of institutional reform and constitutes an important contribution to the growing literature on second-generation reforms.' - Carlos Santiso, Democratization The implementation of a democratic order embedded in a market economy environment has proved immensely difficult. Furthermore, this process is subject to tremendous

variety within Central and Eastern Europe. Ten years after the collapse of communism it was apparent that only Poland and Slovenia surpassed their 1989 levels of GDP. This book scrutinises the arrangements to enforce good governance in this area both by means of external help and domestic political leadership. From the popular assumption that transformation is a collective good, it follows that the problem of free-riding has to be faced. Consequently there is a danger that transformation may never be completed. This book empirically tests the relationship between economic performance and good governance focusing upon voluntary coercion as a means to prevent free-riding behaviour. The author examines the role of international organisations and discusses elite formation as an important element of good governance - something often ignored in the economic analysis of economic performance.

Hungary: An Economy in Transition Istvan Szekely, David M. G. Newbery, Centre for Economic Policy Research (Great Britain), 1993-01-28 Study of the economic transformation of Hungary, presenting local ideas and perceptions and international analysis.

Trimming the Sails Istvan Bencz, s, 2008-01-01 Fiscal consolidation has significant short-term costs which can dampen economic growth. This widely shared consensus in the literature on political economy has made fiscal adjustment highly unpopular among rational politicians. By critically analyzing the international literature and building on evidence from European countries, Benczes conducts a systematic analysis to find out whether it is

possible to experience fiscal consolidation and economic growth at the same time, even in the short run.

**The New Political Economy of Emerging Europe** László Csaba, 2007 In this second, revised, and extended edition, the evolution of emerging Europe is analyzed against the background of major changes in the constitutional, fiscal, regional, and neighborhood policies of the European Union. The book provides an overview of the economic challenges in the post-transition period when the Communist past is no longer a defining feature of development. Interpreting successes and failures in a single analytical frame, the book is devoted to the new agenda faced by middle income countries in the double challenge of globalization and Europeanization. It analyzes if, when, and to what degree joining the European Union provides a solution, and how new members can contribute to the Lisbon Strategy of the EU. The book finds that solid finances, reliance on foreign direct investment, public policies committed to the public purpose rather than to vested interest, and impartial regulation and enforcement of rule of law are among the major components of success. It also

Eastern Europe in the World Economy Csaba, 1990 In this authoritative study of international economic relations, first published in 1991, László Csaba examines the power structures, economic reforms and economic developments within Eastern Europe. He explores the history of intra-regional cooperation and conflicts and international trade, evaluating the changes within the

system created by the standards and requirements of the world economy.

*Back to a Market Economy* József Temesi, Ernő Zalai, István Ábel, 1999 In this text, the authors analyze the way Hungary has recovered economically over the last decade. Their answers to the sophisticated conceptual questions of the Hungarian transformation procedure are far from a simplified view of the recent situation. The past ten years are characterized by achievements and failures, hopes and disappointments, economic results and social problems.

The Capitalist Revolution in Eastern Europe László Csaba, 1995 This volume offers an applied economics interpretation of the modernization process which followed the collapse of the Soviet empire and of the state socialist experiment. From 1984-1994 a loss of employment and production was recorded in Eastern Europe which exceeded that of the great depression of 1929-1933.

From Socialism to Capitalism János Kornai, 2008-01-01 The subjects common to the eight studies in this book are socialism, capitalism, democracy, and change of system. The studies are arranged according to the course of history. The starting point is the classical, pre-reform socialist system (study 1). Then come the discussions about reforms that remain within the socialist system (studies 2 and 3). The second half of the book concerns the subject of the change of system (studies 4-7).

Gorbachev and Europe Vilho Harle, Jyrki Iivonen, 1990

*Struggle and Hope* János Kornai, 1997 Hungarian Kornai (economics, Harvard U.) analyzes stabilization and reform in eastern Europe and appeals for

solidarity and individual rights. He characterizes the problems of stabilization and adjustment as painful but necessary conditions of sustainable growth, and the reforms of what he calls premature welfare states as disproportionately large in relation to the resources available. He emphasizes the ethical implications and historical roots of the problems and the political conditions and consequences of change. Annotation copyrighted by Book News, Inc., Portland, OR

Reshaping Globalization Violetta Zentai, Andrea Krizsan, 2003-01-01 If the importance of globalization were judged by the volume of discussion it has generated, it would surely be a concept of fundamental importance in the contemporary world. And yet, as a concept, globalization is often indigestible, meaning different things to different people, and remaining obscure in its connotations. A virtue of this volume of essays is that the phenomena of globalization are made more approachable by being divided into five discrete themes, each of which forms part of the overall concept and each of which has important implications for policy decisions at the international, regional, and national levels. By differentiating the concept in this way -- into the production of global knowledge, the provision of global public goods, the global trade system, global foreign aid, and global governance -- the analysis is sharpened in an illuminating and stimulating manner. At the same time, the editors, Drs Violetta Zentai and Andrea Krizsan, provide a masterly introductory essay that shows how the various

parts make up the whole. The fact that the book is a product of an international conference held at the Central European University shortly after September 11 in 2001, adds a layer to its significance. The Center for Policy Studies at the Central European University and its collaborators deserve praise for such a thorough and timely analysis of these various strands of globalization. Book jacket.

**Foreign Economic Liberalization** Andras Koves, 2019-03-07 This groundbreaking volume combines theories of economic liberalization with a wide variety of case studies from market and socialist economies. Internationally regarded scholars and Eastern European policymakers have collaborated to evaluate the dramatic economic changes taking place throughout the world. The opening essays contribute to the theoretical debate by showing that foreign economic liberalization goes beyond reducing import barriers to policies on investment, financial liberalization, convertability, and export promotion. Case studies compare successful and unsuccessful liberalization attempts world wide. The disintegration of the CMEA and the policy dilemmas facing Central and Eastern Europe are examined in great detail, as the authors explore the pitfalls and opportunities inherent in the transformation from a centrally planned economy. This up-to-date text will be invaluable for courses on the history and transformation of socialist economies, comparative economic systems, and international trade and investment.

Self-consuming Evolutions Mária Csanádi, 2006 What is the politico-economic-

social logic of the operation and change of party-state systems? How can we explain their similarities and differences in operation and transformation? Why do some party-states carry out reforms and others do not? Why do some collapse and others do not? Why are some transformations accompanied by economic crisis while others by economic growth? This book examines these questions both theoretically and empirically, in an interdisciplinary way. The author introduces the Interactive Party-State (IPS) model as an empirically based, comprehensive tool for analyzing and comparing self-similarities and differences in the operation and transformation of these systems. The model describes the intertwined power network and its variations formed by the interrelationship of individual party-state and economic decision-makers and the structural inequalities in interest promotion. It reveals the structural background of the dynamics of self-reproduction and its main traps due to political rationality of economic behavior that leads to self-consumption of the system during self-reproduction. It also lays down the structural background of different operations and transformation paths. The model is applied to the birth, operation, and transformation of the Romanian, Hungarian, and Chinese party-states.

**Paying the Bill for Goulash-communism** János Kornai, 1996

Privatization, Liberalization, and Destruction László Csaba, 1994 The volume is a selection of papers devoted to key issues of economic transformation; privatization, liberalization, the role of the financial sector and external

economic relations. The interplay of these four areas of transition strategy forms the backbone of the collection.
