*Raphaël Lemkin and the Concept of Genocide* Douglas Irvin-Erickson,2016-10-14 Raphaël Lemkin (1900-1959) coined the word genocide in the winter of 1942 and led a movement in the United Nations to outlaw the crime, setting his sights on reimagining human rights institutions and humanitarian law after World War II. After the UN adopted the Convention on the Prevention and Punishment of the Crime of Genocide in 1948, Lemkin slipped into obscurity, and within a few short years many of the same governments that had agreed to outlaw genocide and draft a Universal Declaration of Human Rights tried to undermine these principles. This intellectual biography of one of the twentieth century's most influential theorists and human rights figures sheds new light on the origins of the concept and word genocide, contextualizing Lemkin's intellectual development in interwar Poland and exploring the evolving connection between his philosophical writings, juridical works, and politics over the following decades. The book presents Lemkin's childhood experience of anti-Jewish violence in imperial Russia; his youthful arguments to expand the laws of war to protect people from their own governments; his early scholarship on Soviet criminal law and nationalities violence; his work in the 1930s to advance a rights-based approach to international law; his efforts in the 1940s to outlaw genocide; and his forays in the 1950s into a social-scientific and historical study of genocide, which he left unfinished. Revealing what the word genocide meant to people in the wake of World War II—as the USSR and Western powers sought to undermine the Genocide Convention at the UN, while delegations from small states and former colonies became the strongest supporters of Lemkin's law—Raphaël Lemkin and the Concept of Genocide examines how the meaning of genocide changed over the decades and highlights the relevance of Lemkin's thought to our own time.

Food Bioconversion Alexandru Mihai Grumezescu,Alina Maria Holban,2017-06-29 Food Bioconversion, Volume Two in the Handbook of Food Bioengineering series is an interdisciplinary resource of fundamental information on waste recovery and biomaterials under certain environmental conditions. The book provides information on how living organisms can be used to transform waste into compounds that can be used in food, and how specialized living cells in plants, animals and water can convert the most polluting agents into useful non-toxic products in a sustainable way. This great reference on the bioconversion of industrial waste is ideal in a time when food resources are limited and entire communities starve. Presents extraction techniques of biological properties to enhance food's functionality, i.e. functional foods or nutraceuticals Provides detailed information on waste material recovery issues Compares different techniques to help advance research and develop new applications Includes research solutions of different biological treatments to produce foods with antibiotic properties, i.e. probiotics Explores how bioconversion technologies are essential for research outcomes to increase high quality food production

Complex Problem Solving Peter A. Frensch,Joachim Funke,2014-04-04 This volume presents a state-of-the-science review of the most promising current European research -- and its historic roots of research -- on complex problem solving (CPS) in Europe. It is an attempt to close the knowledge gap among American scholars regarding the European approach to understanding CPS. Although most of the American researchers are well aware of the fact that CPS has been a very active research area in Europe for quite some time, they do not know any specifics about even the most important research. Part of the reason for this lack of knowledge is undoubtedly the fact that European researchers -- for the most part -- have been rather reluctant to publish their work in English-language journals. The book concentrates on European research because the basic approach European scholars have taken to studying CPS is very different from one taken by North American researchers. Traditionally, American scholars have been studying CPS in natural domains -- physics, reading, writing, and chess playing -- concentrating primarily on exploring novice-expert differences and the acquisition of a complex skill. European scholars, in contrast, have been primarily concerned with problem solving behavior in artificially generated, mostly computerized, complex systems. While the American approach has the advantage of high external validity, the European approach has the advantage of system variables that can be systematically manipulated to reveal the effects of system parameters on CPS behavior. The two approaches are thus best viewed as complementing each other. This volume contains contributions from four European countries -- Sweden, Switzerland, Great Britain, and Germany. As such, it accurately represents the bulk of empirical research on CPS which has been conducted in Europe. An international cooperation started two years ago with the goal of bringing the European research on complex problem solving to the awareness of American scholars. A direct result of that effort, the contributions to this book are both informative and comprehensive.

*On Time* On Barak,2013-07-19 In this pioneering history of transportation and communication in the modern Middle East, On Barak argues that contrary to accepted wisdom technological modernity in Egypt did not drive a sense of time focused on standardization only. Surprisingly, the introduction of the steamer, railway, telegraph, tramway, and telephone in colonial Egypt actually triggered the development of unique timekeeping practices that resignified and subverted the typical modernist infatuation with expediency and promptness. These countertempos, predicated on uneasiness over “dehumanizing” European standards of efficiency, sprang from and contributed to non-linear modes of arranging time. Barak shows how these countertempos formed and developed with each new technological innovation during the nineteenth and early twentieth centuries, contributing to a particularly Egyptian sense of time that extends into the present day, exerting influence over contemporary political language in the Arab world. The universal notion of a modern mechanical standard time and the deviations supposedly characterizing non-Western settings “from time immemorial,” *On Time* provocatively argues, were in fact mutually constitutive and mutually reinforcing.

*Current Flow* Ronen Shamir,2013-11-06 Whether buried underfoot or strung overhead, electrical lines are omnipresent. Not only are most societies dependent on electrical infrastructure, but this infrastructure actively shapes electrified society. From the wires, poles, and generators themselves to the entrepreneurs, engineers, politicians, and advisors who determine the process of electrification, our electrical grids can create power—and politics—just as they transmit it. *Current Flow* examines the history of electrification of British-ruled Palestine in the 1920s, as it marked, affirmed, and produced social, political, and economic difference between Arabs and Jews. Considering the interplay of British colonial interests, the Jewish-Zionist leanings of a commissioned electric company, and Arab opposition within the case of the Jaffa Power House, Ronen Shamir reveals how electrification was central in assembling a material infrastructure of ethno-national separation in Palestine long before political partition plans had ever been envisioned. Ultimately, *Current Flow* sheds new light on the history of Jewish-Arab relations and offers broader sociological insights into what happens when people are transformed from users into elements of networks.
