Land Quality, Agricultural Productivity, and Food Security Keith Daniel Wiebe,2003-01-01 'Action is needed to fight poverty by sustaining the environment and the use of natural resources. Land Quality, Agricultural Productivity, and Food Security explores a range of factors driving food security. The book offers an assessment to link quality of the available land resources with productivity of land and the ability to ensure food security. It offers a mixture of broad-scale assessments across the globe, with detailed case studies, deepening our understanding of economics and decision-making mechanisms. It is recommended to researchers, as well as actors in the private and public domain, who are keen to improve their understanding of the appropriate actions that ensure food security in the decade to come.' - Floor Brouwer, Agricultural Economics Research Institute (LEI), The Hague, The Netherlands Land quality and land degradation affect agricultural productivity and food security, but quantifying these relationships has been difficult. Data are extremely limited and outcomes are sensitive to the choices that farmers make. The contributors to this book - including soil scientists, geographers, and economists - analyse data on soils, climate, land cover, agricultural inputs and outputs, and a variety of socio-economic factors to provide new insights into three key issues: * the extent to which differences in land quality generate differences in agricultural productivity across countries * how farmers' responses to differences or changes in land quality are influenced by economic, environmental, and institutional factors, and * whether land degradation over time threatens productivity growth and food security at local, regional, and global levels.

Bioethanol Production from Food Crops Ramesh C. Ray,S Ramachandran,2018-08-20 Bioethanol Production from Food Crops: Sustainable Sources, Interventions and Challenges comprehensively covers the global scenario of ethanol production from both food and non-food crops and other sources. The book guides readers through the balancing of the debate on food vs. fuel, giving important insights into resource management and the environmental and economic impact of this balance between demands. Sections cover Global Bioethanol from Food Crops and Forest Resource, Bioethanol from Bagasse and Lignocellulosic wastes, Bioethanol from algae, and Economics and Challenges, presenting a multidisciplinary approach to this complex topic. As biofuels continue to grow as a vital alternative energy source, it is imperative that the proper balance is reached between resource protection and human survival. This book provides important insights into achieving that balance. Presents technological interventions in ethanol production, from plant biomass, to food crops Addresses food security issues arising from bioethanol production Identifies development bottlenecks and areas where collaborative efforts can help develop more cost-effective technology

New Developments in Productivity Analysis Charles R. Hulten,Edwin R. Dean,Michael Harper,2007-11-01 The productivity slowdown of the 1970s and 1980s and the resumption of productivity growth in the 1990s have provoked controversy among policymakers and researchers. Economists have been forced to reexamine fundamental questions of measurement technique. Some researchers argue that econometric approaches to productivity measurement usefully address shortcomings of the dominant index number techniques while others maintain that current productivity statistics underreport damage to the environment. In this book, the contributors propose innovative approaches to these issues. The result is a state-of-the-art exposition of contemporary productivity analysis. Charles R. Hulten is professor of economics at the University of Maryland. He has been a senior research associate at the Urban Institute and is chair of the Conference on Research in Income and Wealth of the National Bureau of Economic Research. Michael Harper is chief of the Division of Productivity Research at the Bureau of Labor Statistics. Edwin R. Dean, formerly associate commissioner for Productivity and Technology at the Bureau of Labor Statistics, is adjunct professor of economics at The George Washington University.

Industrial Productivity in Europe Matilde Mas,Robert Stehrer,2012-01-01 This book analyses growth at the total economy and industry level from an international perspective, providing unique cross-country comparisons. The authors focus on the EU-25 countries but also include the US, Japan and Korea. The chapters explore growth patterns from a long-run perspective, although greater attention is paid to the period of expansion from 19952007 and the post 2008 period of crisis. Each contribution builds on a common methodology based on a detailed database providing a high degree of disaggregation with respect to the industries and factors accounting for growth. The role played by ICT is expertly emphasized, in particular the different paths followed in the US and the EU. This topical book will prove to be an unrivalled source of comparative data for academics, practitioners and policymakers alike.

R&D and Productivity Zvi Griliches,2007-12-01 Zvi Griliches, a world-renowned pioneer in the field of productivity growth, has compiled in a single volume his pathbreaking research on R&D and productivity. Griliches addresses the relationship between research and development (R&D) and productivity, one of the most complex yet vital issues in today's business world. Using econometric techniques, he establishes this connection and measures its magnitude for firm-, industry-, and economy-level data. Griliches began his studies of productivity growth during the 1950s, adding a variable of knowledge stock to traditional production function models, and his work has served as the point of departure for much of the research into R&D and productivity. This collection of essays documents both Griliches's distinguished career as well as the history of this line of thought. As inputs into production increasingly taking the form of intellectual capital and new technologies that are not as easily measured as traditional labor and capital, the methods Griliches has refined and applied to R&D become crucial to understanding today's economy.

Improving Food and Beverage Performance Keith Waller,2009-11-03 The food and beverage aspect of hotel operations is often the most difficult area to control effectively, but it plays a crucial role in customer satisfaction. Improving Food and Beverage Performance is able to show how successful catering operations can increase profitability whilst providing continuing improvements in quality, value and service. Keith Waller looks at the practical issues of improving performance combining the key themes of quality customer service and efficient management. This text will enable managers and students alike to recognise all the contributing factors to a successful food and beverage operation. Keith Waller is Senior Lecturer for the Faculty of Business and Management at Blackpool and the Fylde College. He has extensive experience in the hospitality industry and is a member of the Hotel and Catering International Management Association. He is the co-author, with Professor John Fuller, of The Menu, Food and Profit.

Oil Palm Breeding Aik Chin Soh,Sean Mayes,Jeremy A. Roberts,2017-08-14 The oil palm is a remarkable crop, producing around 40% of the world's vegetable oil from around 6% of the land devoted to oil crops. Conventional breeding has clearly been the major focus of genetic improvement in this crop. A mix of improved agronomy and management, coupled with breeding selection have quadrupled the oil yield of the crop since breeding began in earnest in the 1920s. However, as for all perennial crops with long breeding cycles, oil palm faces immense challenges in the coming years with increased pressure from population growth, climate change and the need to develop environmentally sustainable oil palm plantations. In Oil Palm: Breeding, Genetics and Genomics, world leading organizations and individuals who have been at the forefront of developments in this crop, provide their insights and experiences of oil palm research, while examining the different challenges that face the future of the oil palm. The editors have all been involved in research and breeding of oil palm for many years and use their knowledge of the crop and their disciplinary expertise to provide context and to introduce the different research topics covered.

Advances in Efficiency and Productivity Analysis Christopher F. Parmeter,Robin C. Sickles,2020-10-21 The volume examines the state-of-the-art of productivity and efficiency analysis. It brings together a selection of the best papers from the 10th North American Productivity Workshop. By analyzing world-wide perspectives on challenges that local economies and institutions may face when changes in productivity are observed, readers can quickly assess the impact of productivity measurement, productivity growth, dynamics of productivity change, measures of labor productivity, measures of technical efficiency in different sectors, frontier analysis, measures of performance, industry instability and spillover effects. The contributions in this volume focus on the theory and application of economics, econometrics, statistics, management science and operational research related to problems in the areas of productivity and efficiency measurement. Popular techniques and methodologies including stochastic frontier analysis and data envelopment analysis are represented. Chapters also cover broader issues related to measuring, understanding, incentivizing and improving the

productivity and performance of firms, public services, and industries.

Productivity: International comparisons of economic growth Dale Welsch and Jorgenson, 1995 These two volumes present empirical studies that have permanently altered professional debates over investment and productivity as sources of postwar economic growth in industrialized countries. The distinctive feature of investment is that returns can be internalized by the investor. The most straightforward application of this idea is to investments that create property rights, but these volumes broaden the meaning of capital formation to include investments in education and training. *International Comparisons of Economic Growth* focuses on comparisons among industrialized countries. Although Germany and Japan are often portrayed as economic adversaries of the U.S., postwar experiences in all three countries support policies that give high priority to stimulating and rewarding capital formation. In the Asian model of growth exemplified by Japan investments in tangible assets and human capital are especially critical during periods of rapid growth.

Performance Management Asbjørn Røstad, 2012-12-06 This book serves as a textbook for an introductory course on performance management. It gives an overview over various aspects of managing performance of the modern enterprise by focusing on performance evaluation and measurement and performance improvement techniques. Most of the material is based on a thorough literature search and an extensive reference list has been included. The book has been sponsored by the Norwegian productivity research program TOPP and by the COMETT program of the European Community Commission. It has been applied as the text for a continuing education course both within TOPP and the COMETT project APECE. It will also serve as part of a course material for a master's degree in technology management. The book is aimed at an audience of business and technology oriented personnel at middle and higher management level in manufacturing industry. At the same time it is suitable as a textbook for business and engineering schools and colleges. The book is organized in five parts discussing productivity and The book performance, performance planning, performance review, performance improvement and performance influencing factors. The authors have worked closely together to obtain a well coordinated text without overlap. They have provided a draft. This draft has been circulated for comments amongst the authors and amongst external experts. Based on their input the manuscript has been revised. Eivald Røfshagen and Einar Printz Moe, chairman of the board and program manager for the TOPP research program respectively, have also provided valuable input to the book.

Ergonomic Workplace Design for Health, Wellness, and Productivity Alan Hedge, 2016-08-05 Even with today's mobile technology, most work is still undertaken in a physical workplace. Today's workplaces need to be healthy environments that minimize the risks of illnesses or injuries to occupants to compete in the marketplace. This necessitates the application of good ergonomics design principles to the creation of effective workplaces, and this is the focus of this book. This book will: · Focus on ergonomic design for better health and ergonomic design for better productivity · Presents environments that support new ways of working and alternative workplace strategies, as well as the impacts of new technologies · Covers the role of ergonomics design in creating sustainable workplaces · Includes ergonomics design for a wide variety of workplaces, from offices to hospitals, to hotels to vehicles, etc... · Shows the design principles on how to design and create a healthy and productive workplace The market lacks an ergonomics design book that covers the topics that this book will cover. This book summarizes design principles for practitioners, and applies them to the variety of workplace settings described in the book. No other book currently on the market does that.

Agricultural Productivity Susan M. Capalbo, John M. Antle, 2015-08-11 This book, first published in 1988, provides a comprehensive, integrated body of knowledge concerning agricultural productivity research, highlighting both its strengths and limitations. This book will be of value to scholars and research leaders for the knowledge it conveys of future productivity research, and will also be of interest to students of environmental studies.

Shiftwork, Capital Hours and Productivity Change Murray F. Foss, 2012-12-06 This volume brings together and expands on a body of research that I began in the early 1960s and have continued up to the present. It deals mainly with shiftwork-work that is performed during other than normal daytime hours. Shiftwork is a characteristic of economic life in the United States and abroad that has increased in importance over the years; according to the Bureau of Labor Statistics, one out of five full-time and part-time employees in the United States works on shifts. My interest in this field concerns fixed capital, specifically, changes in weekly hours worked by capital over long periods of time, and the significance of those changes in the measurement of long-run productivity change. In studies of growth, the measurement of capital input-by capital stocks or the services yielded by those stocks-typically makes no allowance for the changing hours worked by capital. Capital services are assumed to be proportional to the stocks. Consequently, in analyses of output growth in a growth accounting framework, the effect of longer capital hours is a component of multifactor or total factor productivity growth.

The Marginal Productivity Theory of Distribution John Pullen, 2009-06-26 The Marginal Productivity Theory of Distribution (MPTD) claims that in a free-market economy the demand for a factor of production will depend upon its marginal product - where marginal product is defined as the change in total product that is caused by, or that follows, the addition or subtraction of the marginal unit of the factor used in the production process, with all other inputs held constant. From its inception in the early nineteenth century the MPTD has been claimed by some economists to be a solution to the ethical problem of distributive justice, i.e. to be a means of determining fairness in wages, profits, interest and rent. Other economists have rejected this ethical claim, but have seen the MPTD as a valid demand-side criterion in the determination of equilibrium and efficiency. This book argues that the MPTD is valid, neither as a normative theory of social justice, nor as a positive law of economics. It suggests that economics is yet to develop a satisfactory theory of distribution that is scientific in the quantitative or mathematical sense. Through a survey of the origin and subsequent evolution of the MPTD in the writings of over 50 contributors over 150 years, John Pullen presents a critical history of the concept. The book begins by examining the conceptual tools that have been deployed to facilitate this analysis of past contributions to the MPTD and then looks at various economists and their contribution to the debate including its supporters such as Wicksteed, Marshall, Wicksell and Stigler, and its critics such as Pareto, Hobson, Edgeworth, Adriance and Cassel.

The Oxford Handbook of Creative Industries Candace Jones, Mark Lorenzen, Jonathan Sapsed, 2015-07-23 The Oxford Handbook of Creative Industries is a reference work, bringing together many of the world's leading scholars in the application of creativity in economics, business and management, law, policy studies, organization studies, and psychology. Creative industries research has become a regular theme in academic journals and conferences across these subjects and is also an important agenda for governments throughout the world, while business people from established companies and entrepreneurs reevaluate and innovate their models in creative industries. The Handbook is organized into four parts: Following the editors' introduction, Part One on Creativity includes individual creativity and how this scales up to teams, social networks, cities, and labour markets. Part Two addresses Generating and Appropriating Value from Creativity, as achieved by agents and organizations, such as entrepreneurs, stars and markets for symbolic goods, and considers how performance is measured in the creative industries. Part Three covers the mechanics of Managing and Organizing Creative Industries, with chapters on the role of brokerage and mediation in creative industry networks, disintermediation and globalisation due to digital technology, the management of project-based organizations in creative industries, organizing events in creative fields, project ecologies, Global Production Networks, genres and classification and sunk costs and dynamics of creative industries. Part Four on Creative Industries, Culture and the Economy offers chapters on cultural change and entrepreneurship, on development, on copyright, economic spillovers and government policy. This authoritative collection is the most comprehensive source of the state of knowledge in the increasingly important field of creative industries research. Covering emerging economies and new technologies, it will be of interest to scholars and students of the arts, business, innovation, and policy.
