Retail Market Study 2014 Marc-Christian Riebe,2014-02-01 The Retail Market Study 2014 of The Location Group is the one and only study of its kind with 150 of the most notable international cities of the fashion and retail world and 3'000 store openings on 1,500 pages. Over 1,000 retailers, 800 shopping streets and 500 shopping centers were analyzed. The study reached more than 100,000 readers worldwide so far.

Shopping Environments Peter Coleman,2007-06-07 Shopping centers have become the most common of shopping environments and have influenced the make-up of cities around the world. However, in recent years, the enclosed mall has evolved and diversified with new types of retail environments that were developed to better suit their locale and meet public expectation. This design guide has over 600 illustrations that present the core values and considerations that make a successful retail center: location, catchment user needs, as well as access and layout. Covering everything from site master planning to the essentials of public facilities and the technical systems, this is essential reading for architects of contemporary shopping centers. A series of international examples showcasing different types of shopping environments are included to cover the wide range of designs that have occurred in recent years. From the out of town mall to retail parks and mixed use town center developments, the best of contemporary design is illustrated to provide both practical information and inspiration.

Dynamic Trip Modelling Robert G.V. Baker,2006-08-05 The thesis of this book is that there are one set of equations that can define any trip between an origin and destination. The idea originally came from work that I did when applying the hydrodynamic analogy to study congested traffic flows in 1981. However, I was disappointed to find out that much of the mathematical work had already been done decades earlier. When I looked for a new application, I realised that shopping centre demand could be like a longitudinal wave, governed by centre opening and closing times. Further, a solution to the differential equation was the gravity model and this suggested that time was somehow part of distance decay. This was published in 1985 and represented a different approach to spatial interaction modelling. The next step was to translate the abstract theory into something that could be tested empirically. To this end, I am grateful to my Ph. D supervisor, Professor Barry Garner who taught me that it is not sufficient just to have a theoretical model. This book is an outcome of this on-going quest to look at how the evolution of the model performs against real world data. This is a far more difficult process than numerical simulations, but the results have been more valuable to policy formulation, and closer to what I think is spatial science. The testing and application of the model required the compilation of shopping centre surveys and an Internet data set.

Shopping Centre Development (RLE Retailing and Distribution) John A. Dawson,J. Dennis Lord,2012-08-09 The shopping centre has become an established feature of urban structure over the past thirty years. Development of centres has been rapid and little attempt has been made to consider the development process and the problems caused by it. There is a growing awareness that centres are not always wholly beneficial to their host cities and that some public policy control is necessary. This book examines the shopping centre development process and analyses the control policies which have been taken and which are needed. It draws on material from

throughout the developed world. First published 1985.

The Routledge Companion to the History of Retailing Jon Stobart,Vicki Howard,2018-11-08 Retail history is a rich, cross-disciplinary field that demonstrates the centrality of retailing to many aspects of human experience, from the provisioning of everyday goods to the shaping of urban environments; from earning a living to the construction of identity. Over the last few decades, interest in the history of retail has increased greatly, spanning centuries, extending to all areas of the globe, and drawing on a range of disciplinary perspectives. By offering an up-to-date, comprehensive thematic, spatial and chronological coverage of the history of retailing, this Companion goes beyond traditional narratives that are too simplistic and Euro-centric and offers a vibrant survey of this field. It is divided into four broad sections: 1) Contexts, 2) Spaces and places, 3) People, processes and practices and 4) Geographical variations. Chapters are written in an analytical and synthetic manner, accessible to the general reader as well as challenging for specialists, and with an international perspective. This volume is an important resource to a wide range of readers, including marketing and management specialists, historians, geographers, economists, sociologists and urban planners.
