The Voice in the Machine Roberto Pieraccini, 2012 An examination of more than sixty years of successes and failures in developing technologies that allow computers to understand human spoken language. Stanley Kubrick's 1968 film 2001: A Space Odyssey famously featured HAL, a computer with the ability to hold lengthy conversations with his fellow space travelers. More than forty years later, we have advanced computer technology that Kubrick never imagined, but we do not have computers that talk and understand speech as HAL did. Is it a failure of our technology that we have not gotten much further than an automated voice that tells us to say or press 1? Or is there something fundamental in human language and speech that we do not yet understand deeply enough to be able to replicate in a computer? In *The Voice in the Machine*, Roberto Pieraccini examines six decades of work in science and technology to develop computers that can interact with humans using speech and the industry that has arisen around the quest for these technologies. He shows that although the

computers today that understand speech may not have HAL's capacity for conversation, they have capabilities that make them usable in many applications today and are on a fast track of improvement and innovation. Pieraccini describes the evolution of speech recognition and speech understanding processes from waveform methods to artificial intelligence approaches to statistical learning and modeling of human speech based on a rigorous mathematical model--specifically, Hidden Markov Models (HMM). He details the development of dialog systems, the ability to produce speech, and the process of bringing talking machines to the market. Finally, he asks a question that only the future can answer: will we end up with HAL-like computers or something completely unexpected?

Your Voice Speaks Volumes Jane Setter, 2019-10-24 Why do we speak the way we do, and what do our voices tell others about us? What is the truth behind the myths that surround how we speak? Jane Setter explores these and other fascinating questions in this engaging introduction to the power and the science of the voice. The book first takes us on a tour of the sounds in our language and how we produce them, as well as how and why those sounds vary in different varieties of English. The

origins of our vast range of accents are explained, along with the prejudices associated with them: why do we feel such loyalty to our own accent, and what's behind our attitudes to others? We learn that much of what we believe about how we speak may not be true: is it really the case, for instance, that only young people use 'uptalk', or that only women use vocal fry? Our voices can also be used as criminal evidence, and to help us wear different social and professional hats. Throughout the book, Professor Setter draws on examples from the media and from her own professional and personal experience, from her work on the provenance of the terrorist 'Jihadi John' to why the Rolling Stones sounded American.

Accent Modification Kate DeVore, 2017-03 Detailed instructional manual with extensive embedded audio for every sound in Neutral American English, by a leading author, speech pathologist, and theatre speech and dialect coach. Includes information on stress, intonation, and rhythm as well as sounding natural. Appropriate for both ESL and native speakers of English with a regional dialect. Written and spoken instructions for creating the American sounds provided. Whether you're looking for

accent modification, accent reduction, or learning an American accent, this manual with audio is right for you. Listen to the instructions, then listen and repeat words and sentences for every sound of American English. Additional practice material included. Includes suggestions for focusing your practice depending on where you are from.

Voice and Diction Jon Eisenson, 1997 This book provides comprehensive coverage of voice production, voice improvement, and articulation. In addition, pertinent material from related disciplines of speech and hearing sciences, linguistics, and phonetics is included. The seventh edition is updated to reflect contemporary information about voice production and diction-articulation, pronunciation, and intonation. In addition, it provides a comprehensive overview of voice, diction, and effective communication. A new Appendix D, Pronunciation Watch, has been added to address ESL speakers' intonation and articulation problems. This practical book equips readers with the knowledge of how to use the mechanisms for voice and oral language effectively.

Your Voice and Articulation Ethel C. Glenn, Phillip J. Glenn, Sandra H. Forman, 1998 Often people whose second language is English have a difficult time with phonetics and articulation. This book presents a clear and understandable discussion of the anatomy and physiology of the human voice. Using a step-by-step approach, the authors examine all the sounds of American English, and all the vocal elements such as pitch, volume, rate, and vocal color. They have also sought out interesting and often amusing passages from classical and modern prose, drama, speeches, poetry, and advertising copy for practice. This reference is suitable for people in the medical fields, those with speech disorders, singing instructors, and those whose are learning English as a second language. Also appropriate for speech pathologists/audiologists, communication specialists.

Sounding Out Your Voice and Speech Christabel Burniston, 1989

Improvements in Speech Synthesis E. Keller, G. Bailly, A. Monaghan, J. Terken, M. Huckvale, 2001-11-28 Naturalness in synthetic speech is one of the most intractable problems in information technology today. Although speech synthesis systems have improved considerably over

the last 20 years, they rarely sound entirely like human speakers. Why is this so, and what can be done about it? * Prosodic processing must be rendered more varied and more appropriate to the speech situation * Timing, melodic control and the relationships between the various prosodic parameters need increased attention * Signal processing systems must be developed and perfected that are capable of generating more than just one voice from a database * A better understanding must be achieved of what distinguishes one voice from another, and of how speech styles differ between simply reading aloud numbers and sentences and their use in interactive speech * New evaluation methodologies should be developed to provide objective and subjective measurements of the intelligibility of the synthetic speech and the cognitive load imposed upon the listener by impoverished stimuli * Adequate text markup systems must be proposed and tested with multiple languages in real-world situations * Further research is required to integrate speech synthesis systems into larger natural-language processing systems

Improvements in Speech Synthesis presents the latest research in the above areas. Contributors include speech synthesis specialists from 16 countries, with

experience in the development of systems for 12 European languages. This volume emerges from a four-year European COST project focussed on The Naturalness of Synthetic Speech, and will be a valuable text for everyone involved in speech synthesis.

Punktown Jeffrey Thomas, Michael Marshall Smith, 2005-05-01 Jeffrey Thomas' collection

Punktown explored the streets and back alleys of a futuristic and nightmarish urbanscape in a series of unconnected short stories. In Punktown: Third Eye, Thomas has teleported authors Simon Logan, Jonathan Lyons, Charlee Jacob, Paul G. Tremblay, Michael McCarty, Mark McLaughlin, Garrett Peck, Thomas Andrew Hughes, and Scott Thomas into the city to pen their own tales of its citizens, aliens, mutations, and sentient machines. These talented authors bring a new perspective, a personal vision, a third eye view to the phantasmopolis that is Punktown.

Alcohol, Our Favourite Drug , 1986 Gives a balanced, informed view of the facts about alcohol,

and makes policy recommendations on drinking and driving, and taxation, as well as personal recommendations for safe, risky, and harmful weekly intake.

Deadstock Jeffrey Thomas,2007-02-27 At an abandoned apartment complex with a dark history in Punktown, a crime-ridden metropolis on the colony world Oasis, a tough street gang and a band of mutant squatters have been trapped inside by bioengineered life forms mindlessly bent on destroying them like vermin.

Multi-source, Multilingual Information Extraction and Summarization Thierry Poibeau,Horacio Saggion,Jakub Piskorski,Roman Yangarber,2012-08-14 Information extraction (IE) and text summarization (TS) are powerful technologies for finding relevant pieces of information in text and presenting them to the user in condensed form. The ongoing information explosion makes IE and TS critical for successful functioning within the information society. These technologies face particular challenges due to the inherent multi-source nature of the information explosion. The technologies must now handle not isolated texts or individual narratives, but rather large-scale repositories and streams---

in general, in multiple languages---containing a multiplicity of perspectives, opinions, or commentaries on particular topics, entities or events. There is thus a need to adapt existing techniques and develop new ones to deal with these challenges. This volume contains a selection of papers that present a variety of methodologies for content identification and extraction, as well as for content fusion and regeneration. The chapters cover various aspects of the challenges, depending on the nature of the information sought---names vs. events,--- and the nature of the sources---news streams vs. image captions vs. scientific research papers, etc. This volume aims to offer a broad and representative sample of studies from this very active research field.
