Top Quark Physics at Hadron Colliders Arnulf

Quadt,2007-08-16 This will be a required acquisition text for academic libraries. More than ten years after its discovery, still relatively little is known about the top quark, the heaviest known elementary particle. This extensive survey summarizes and reviews top-quark physics based on the precision measurements at the Fermilab Tevatron Collider, as well as examining in detail the sensitivity of these experiments to new physics. Finally, the author provides an overview of top quark physics at the Large Hadron Collider.

Search for New Physics in tt̄ Final States with Additional Heavy-Flavor Jets with the ATLAS

Detector Javier Montejo Berlingen, 2016-07-20 This doctoral thesis focuses on the search for new phenomena in top-antitop quark ($t\bar{t}$) final states with additional b-quark jets at the LHC. It uses the full Run 1 dataset collected by the ATLAS experiment in proton-proton collisions at $\sqrt{s}=8$ TeV. The final state of interest consists of an isolated lepton, a neutrino and at least six jets with at least four b-tagged jets, a challenging experimental signature owing to the large background from $t\bar{t}$ +heavy-flavor production. This final state is characteristic of $t\bar{t}H$ production, with the Higgs boson decaying into $b\bar{b}$, a process that allows direct probing of the top-Higgs Yukawa coupling. This signature is also present in many extensions of the Standard Model that have been proposed as solutions to the hierarchy problem, such as supersymmetry or composite Higgs models, which predict the pair production of bosonic or fermionic top quark partners, or the anomalous production of four-top-quark events. All these physics processes have been searched for using an ambitious search strategy that has been developed on the basis of a combination of state-of-art theoretical predictions and a sophisticated statistical analysis to constrain in-situ the large background uncertainties. As a result, the most restrictive bounds to date on the above physics processes have been obtained.

Losing You Nicci French, 2008-04-01 It's Nina Landry's birthday, and she's supposed to have her kids ready to leave in a few hours for a Christmas holiday in Florida with her new boyfriend, but her fifteen-year-old daughter Charlie spent the night

at a friend's and hasn't come home yet. Not by ten a.m., not by eleven. Nina is getting angry---they have a plane to catch, and Charlie hasn't even bothered to pack. As time passes, though slower and slower by the minute, Nina becomes uneasy. Her anger gives way to worry, and that worry quickly builds into panic. By one p.m., she's wondering, has Charlie run away, or has something far worse happened? And why won't anyone---not the cops, not Charlie's friends, not Charlie's father---take her disappearance seriously? As day turns to night on their home of Sandling Island sixty miles from London, and a series of ominous secrets leads Nina from sickening suspicion to deadly certainty, the question becomes less whether she and her daughter will leave the island in time and more whether they'll ever leave it again. In *Losing You*, the newest thriller from the long-acclaimed master of psychological suspense, Nicci French unravels one mother's life and replaces it with every mother's worst nightmare.
