*Data Smart* John W. Foreman, 2013-10-31 Data Science gets thrown around in the press like it's magic. Major retailers are predicting everything from when their customers are pregnant to when they want a new pair of Chuck Taylors. It's a brave new world where seemingly meaningless data can be transformed into valuable insight to drive smart business decisions. But how does one exactly do data science? Do you have to hire one of these priests of the dark arts, the data scientist, to extract this gold from your data? Nope. Data science is little more than using straight-forward steps to process raw data into actionable insight. And in *Data Smart*, author and data scientist John Foreman will show you how that's done within the familiar environment of a spreadsheet. Why a spreadsheet? It's comfortable! You get to look at the data every step of the way, building confidence as you learn the tricks of the trade. Plus, spreadsheets are a vendor-neutral place to learn data science without the hype. But don't let the Excel sheets fool you. This is a book for those serious about learning the analytic techniques, the math and the magic, behind big data. Each chapter will cover a different technique in a spreadsheet so you can follow along: Mathematical optimization, including non-linear programming and genetic algorithms Clustering via k-means, spherical k-means, and graph modularity Data mining in graphs, such as outlier detection Supervised AI through logistic regression, ensemble models, and bag-of-words models Forecasting, seasonal adjustments, and prediction intervals through monte carlo simulation Moving from spreadsheets into the R programming language You get your hands dirty as you work alongside John through each technique. But never fear, the topics are readily applicable and the author laces humor throughout. You'll even learn what a dead squirrel has to do with optimization modeling, which you no doubt are dying to know.

**Twelve Years a Slave** Solomon Northup, 2024-01-04 Filmatized in 2013 and the official recipient of three Oscars, Solomon Northup's powerful slave narrative 'Twelve Years a Slave' depicts Northup's life as he is sold into slavery after having spent 32 years of his life living as a free man in New York. Working as a travelling musician, Northup goes to Washington D.C, where he is kidnapped, sent to New Orleans, and sold to a planter to suffer the relentless and brutal life of a slave. After a dozen years, Northup escapes to return to his family and pulls no punches, as he describes his fate and that of so many other black people at the time. It is a harrowing but vitally important book, even today. For further reading on this subject, try 'Uncle Tom's Cabin' by Harriet Beecher Stowe. Solomon Northup (c.1807-c.1875) was an American abolitionist and writer, best remembered for his powerful race memoir 'Twelve Years a Slave'. At the age of 32, when he was a married farmer, father-of-three, violinist and free-born man, he was kidnapped in Washington D.C and shipped to New Orleans, sold to a planter and enslaved for a dozen years. When he gained his freedom, he wrote his famous memoir and spent some years lecturing across the US, on behalf of the abolitionist movement. 'Twelve Years a Slave' was published a year after 'Uncle Tom's Cabin' by Harriet Beecher Stowe and built on the anti-slavery momentum it had developed. Northup's final years are something of a mystery, though it is thought that he struggled to cope with family life after being freed.

The Caribbean Blue Economy Peter Clegg, Robin Mahon, Patrick McConney, Hazel A. Oxenford, 2020-10-22 The Blue Economy is emerging on the global scene as a powerful and persuasive new concept for sustainable development based on economic activities associated with the ocean. Several regions globally have adopted this concept at national and regional levels, including the Caribbean. Given the complex, multisectoral and multilevel nature of the Blue Economy, it is clear that different approaches will be needed for different regions. Hence, this volume explores the opportunities, threats and risks involved in operationalising the Blue Economy in the Wider Caribbean Region, defined as northern Brazil to the USA and all mainland and island countries and territories in-between. The first part of the book looks at where the region stands in the global picture regarding adoption of the Blue Economy and what is planned. The second set of chapters examines key crosscutting issues such as ecosystem services, climate change and governance at national and regional levels that could make or break the Blue Economy initiative. The book then goes on to explore the main sectoral activities that will constitute the Blue Economies in the region: fisheries, tourism, shipping and transport, renewable energy, oil and gas, seabed mining and waste management are all considered. The book ends with a synthesis of the political and technical requirements to overcome threats and take advantage of opportunities in the Blue Economy.

*Liberal Democracy in Crisis* Alen Toplišek, 2018-10-02 This book rethinks resistance against neoliberalism in the context of the crisis of Western liberal democracy and the rise of new radical left parties in Europe. Drawing upon a wide range of methodological approaches in contemporary political and social theory, it explores how the aftermath of the 2008 financial crisis represents the opening of possibilities for resistance and examines the structural hurdles facing radical politics in effectively challenging neoliberalism. The author challenges the dominant conceptions of democratic politics by critically interrogating the role of liberalism in the depoliticisation of governing and the neoliberal restructuring of the democratic role of the state. The trajectory of new radical left parties in Slovenia, Greece and

Spain is used to demonstrate the need to overcome the binary divide between institutional politics and resistance in radical political theory and practice.

Stochastic Methods in Structural Dynamics G.I. Schuëller,Masanobu Shinozuka,2012-12-06 This book is based on a number of lectures presented at CISM\* -Course on Stochastic Methods in Structural Mechanics, August 28 -30,1985 in Udine, Italy. The chapters presented here are either expanded and/or updated versions of these lectures. The purpose is to introduce readers to basic principles of stochastic methods of structural mechanics, particularly to those of dynamics. For those readers who wish to pursue the study further, the references provided in each chapter will serve as a useful source of information. Nevertheless the readers find some of the advanced topics presented by the authors immediately useful for their own application. The first section of Chapter 1 introduces the reader to the basic principles of probability theory followed by the discussion of methods to calculate time invariant structural reliability estimates, where the exact methods are particularly emphasized. The Chapter continues with a first introduction to the theory of stochastic processes. The properties of Gaussian and other type of processes are discussed. In dealing with observed data, tests of stationarity, as well as methods to estimate power spectra are described in some detail. The Chapter closes with a first treatise of excursions of stochastic processes in terms of number and duration of excursions, extremes, envelopes and time to first excursions. In Chapter 2 linear structures under stochastic loading are analyzed by applying the concepts as outlined in Chapter 1. The analyses are carried out in the time and frequency range respectively.
