2 **IMAGING LIGHT WITH PHOTOELECTRONS ON THE NANO-FEMTO SCALE** Yanan Dai, 2020-09-03 This thesis presents significant advances in the imaging and theory of the ultrafast dynamics of surface plasmon polariton fields. The author details construction of a sub-10 femtosecond and sub-10 nanometer spatiotemporal resolution ultrafast photoemission microscope which is subsequently used for the discovery of topological meron and skyrmion-like plasmonic quasiparticles. In particular, this enabled the creation of movies of the surface plasmon polariton fields evolving on sub-optical wavelength scales at around 0.1 femtosecond per image frame undergoing vortex phase evolution. The key insight that the transverse spin of surface plasmon polaritons undergoes a texturing into meron or skyrmion-like topological quasiparticles (defined by the geometric charge of the preparation) follows. In addition, this thesis develops an analytical theory of these new topological quasiparticles, opening new avenues of research, while the ultrafast microscopy techniques established within will also be broadly applicable to studies of nanoscale optical excitations in electronic materials.

2 **UREA** Carla Maria Muñoz, Andrés Manuel Fernández, 2012 Urea serves an important role in the metabolism of nitrogen-containing compounds by animals and is the main nitrogen-containing substance in the urine of mammals. It is solid, colourless, and odourless and highly soluble in water. Urea is widely used in fertilisers as a convenient source of nitrogen and also an important raw material for the chemical industry. In this book, the authors discuss the synthesis, properties and uses of urea. Topics included in this compilation are the production of granular urea as nitrogenous fertiliser; urea and urea transporter physiology; urea transport in fungi and plants; urea used as the neutralising agent for homogenous precipitation; the effect of urea on polymer films, natural fibres wood and jute plastic composites; pharmacological recognition of urea derivatives in brain disorders; non-bonding properties of urea; valproyl urea; and urea as an effective therapeutic option syndrome of inappropriate antidiuretic hormone secretion (SIADH).

2 **EARNING AND SPENDING IN SOUTH AFRICA** R. Hirschowitz, 1997

2 **THE CLEANER OF CHARTRES** Salley Vickers, 2013-06-27 “If you enjoy the work of Marilynne Robinson, Penelope Fitzgerald, James Salter...you should be reading Vickers.” —Michael Dirda, The Washington Post Book World There is something very special about Agnès Morel. A quiet presence in the small French town of Chartres, she can usually be found cleaning the famed medieval cathedral or doing odd jobs for the townspeople. No one knows where she came from or why. Not diffident Abbé Paul, nor lonely Professor Jones, nor even Alain Fleury, whose attention she catches with her tawny eyes. She has transformed all their lives in her own subtle way, yet no one suspects the dark secret Agnès is hiding. Then an accidental encounter dredges up the specter of her past, and the nasty meddling of town gossips forces Agnès to confront her tragic history and the violent act that haunts it.

2 **ELECTRONIC EXCITATIONS AT METAL SURFACES** Ansgar Liebsch, 2013-03-09 In this new work, the focus is on the dynamical response of metal electrons to several types of incident electromagnetic fields. The author, an eminent theorist, discusses time-dependent local density approximation’s importance in both elucidating electronic surface excitations and describing the ground state properties of electronic systems. Chapters detail theoretical formulations and computational procedures, covering such areas as single-particle and collective modes, spatial distribution of the induced surface charges, and local electric fields. Excitation spectra are shown for a variety of clean simple metals, noble metals, chemisorbed overlayers, charged surfaces, and small metal particles.

2 **TRANSACTIONS OF THE SHROPSHIRE ARCHAEOLOGICAL AND NATURAL HISTORY SOCIETY**, 1894

2 **THE MAID OF BUTTERMERE** Melvyn Bragg, 1987-01-01 Melvyn Bragg’s highly-acclaimed bestselling historical novel, the story behind one of the 19th century’s greatest scandals. Set in the Lake District in the early 19th century, the riveting story of an imposter, bigamist and fortune hunter who came to grief by falling helplessly in love with the famed ‘Maid of Buttermere’.

2 **EXTRAGALACTIC RADIO SOURCES** Wolfgang Priester, Johan Rosenberg, 1965

2 **TIN OXIDE MATERIALS** Marcelo Ornaghi Orlandi, 2019-10-05 Tin Oxide Materials: Synthesis, Properties, and Applications discusses the latest in metal oxides, an emerging area in electronic materials. As more is learned about this important materials system, more functionalities and applications have been revealed. This key reference on the topic covers important material that is ideal for materials scientists, materials engineers and materials chemists who have been introduced to metal oxides as a general category of materials, but want to take the next step and learn more about a specific material. Provides a complete resource on tin oxide materials systems, including in-depth discussions of properties, their synthesis, modelling methods, and applications Presents information on the well-investigated SnO2, but also includes discussions on its emerging stoichiometries, such as SnO and Sn3O4 Includes the most relevant applications in varistors, sensing devices, fuel cells, transistors, biological studies, and much more

2 **NANOPARTICLES IN BIOMEDICAL IMAGING** Jeff W.M. Bulte, Michel Modo, 2007-11-22 The current generation of imaging nanoparticles is diverse and dependent on its myriad of applications. This book provides an overview of how these imaging particles can be designed to fulfill specific requirements for applications across different imaging modalities. It presents, for the first time, a comprehensive interdisciplinary overview of the impact nanoparticles have on biomedical imaging and is a common central resource for researchers and teachers.

2 **PROFESSION 2013** Rosemary G. Feal, 2014-01-06 This issue of Profession contains Michael Brubaker’s introduction to his Presidential Forum, Avenues of Access, which was held at the 2013 MLA convention, and the essays of the forum participants: Joshua A. Boldt, Beth Landers, Maria Maisto, and Robert Samuels. The issue also features a section on a statistical study documenting the participation of people of color in humanities doctoral programs. 2 **HYDROGEN AS AN ENERGY CARRIER** G. Imarisio, A.S. Strub, 1983-10-31 Proceedings of the 3rd International Seminar, held in Lyon, May 25-27, 1983

2 **PHOTONIC PROBES OF SURFACES** P. Halevi, 2012-12-02 This volume is devoted principally to optical spectroscopies of material surfaces and also encompasses scattering techniques and theoretical response analysis as well as spectroscopies. In addition to solid surfaces some attention is also devoted to interfaces between two solids, between a solid and a liquid and to a liquid-vapor interface. These surfaces may be clean and perfect, in which case the purpose of the spectroscopical method at hand is to determine the deviation of the atomic structure in the surface region from that in the bulk, namely the surface reconstruction. Otherwise the surface may be imperfect due to roughness, strain or overlayers, in which case the spectroscopy can yield information on the nature of such imperfections, including the monitoring of growth processes. One of the foremost purposes of surface spectroscopies is to extract information on atomic and molecular adsorbates on solid surfaces. Most of the 10 chapters are concerned with photonic sources of excitation, the respective spectral regions ranging from the far infrared to X-rays. In conclusion this book provides a state-of-the-art review of all major types of photonic probes of surfaces and interfaces and deals with both applications and experiment and theory.
