**Land Quality, Agricultural Productivity, and Food Security** Keith Daniel Wiebe,2003-01-01 'Action is needed to fight poverty by sustaining the environment and the use of natural resources. Land Quality, Agricultural Productivity, and Food Security explores a range of factors driving food security. The book offers an assessment to link quality of the available land resources with productivity of land and the ability to ensure food security. It offers a mixture of broad-scale assessments across the globe, with detailed case studies, deepening our understanding of economics and decision-making mechanisms. It is recommended to researchers, as well as actors in the private and public domain, who are keen to improve their understanding of the appropriate actions that ensure food security in the decade to come.' - Floor Brouwer, Agricultural Economics Research Institute (LEI), The Hague, The Netherlands Land quality and land degradation affect agricultural productivity and food security, but quantifying these relationships has been difficult. Data are extremely limited and outcomes are sensitive to the choices that farmers make. The contributors to this book - including soil scientists, geographers, and economists - analyse data on soils, climate, land cover, agricultural inputs and outputs, and a variety of socio-economic factors to provide new insights into three key issues: \* the extent to which differences in land quality generate differences in agricultural productivity across countries \* how farmers' responses to differences or changes in land quality are influenced by economic, environmental, and institutional factors, and \* whether land degradation over time threatens productivity growth and food security at local, regional, and global levels.

New Developments in Productivity Analysis Charles R. Hulten, Edwin R. Dean, Michael Harper, 2007-11-01 The productivity slowdown of the 1970s and 1980s and the resumption of productivity growth in the 1990s have provoked controversy among policymakers and researchers. Economists have been forced to reexamine fundamental questions of measurement technique. Some researchers argue that econometric approaches to productivity measurement usefully address shortcomings of the dominant index number techniques while others maintain that current productivity statistics underreport damage to the environment. In this book, the contributors propose innovative approaches to these issues. The result is a state-of-the-art exposition of contemporary productivity analysis. Charles R. Hulten is professor of economics at the University of Maryland. He has been a senior research associate at the Urban Institute and is chair of the Conference on Research in Income and Wealth of the National Bureau of Economic Research. Michael Harper is chief of the Division of Productivity Research at the Bureau of Labor Statistics. Edwin R. Dean, formerly associate commissioner for Productivity and Technology at the Bureau of Labor Statistics, is adjunct professor of economics at The George Washington University.

**Industrial Productivity in Europe** Matilde Mas, Robert Stehrer, 2012-01-01 This book analyses growth at the total economy and industry level from an international perspective, providing unique cross-country comparisons. The authors focus on the EU-25 countries but also include the US, Japan and Korea. The chapters explore growth patterns from a long-run perspective, although greater attention is paid to the period of expansion from 1995-2007 and the post 2008 period of crisis. Each contribution builds on a common methodology based on a detailed database providing a high degree of disaggregation with respect to the industries and factors accounting for growth. The role played by ICT is expertly emphasized, in particular the different paths followed in the US and the EU. This topical book will prove to be an unrivalled source of comparative data for academics, practitioners and policymakers alike.

*How Far Across the River?* Nicholas Hope, Dennis Yang, Mu Li, 2003-08-13 Gradual change has been a hallmark of the Chinese reform experience, and China's success in its sequential approach makes it unique among the former command economies. Since 1979, with the inception of the continuing era of reform, the Chinese economy has flourished. Growth has averaged nine percent a year, and China is now a trillion dollar economy. China has become a major trading power and the predominant target among developing countries for foreign direct investment. Despite all this, China remains poor and the reform process unfinished. This book takes its defining theme from Deng Xiaoping's famous metaphor for gradual reform: "feeling the stones to cross the river." How far has China progressed in fording the river? The experts who contributed to this volume tackle many aspects of that question, assessing Chinese progress in policy reform, priorities for further reform, and the research still needed to inform policymakers' decisions.
